

DO YOU KNOW WHAT PHARMACISTS DO ?

A pharmacist is responsible for filling drug prescriptions for individuals. While this might appear simple, here's a listing of there many additional responsibilities.

- We check for interactions with your medications, disease states, allergy profile, and organize and track your medications; keeping the records for years for you and your health provider.
- We fill your prescriptions in a timely manner; then give you the information necessary so you get the desired effects from your medication; minimizing the potential side effects.
- We are the go between for you and your health provider and your insurance company so you get the best possible drug therapy allowed.
- Your Pharmacist is the most accessible health care provider to the public. After talking to your pharmacist we can help your healthcare provider change drug therapies, eliminate unnecessary medications, or even keep you from being hospitalized.
- Someone which stocks and carries an inventory of over \$120,000 of products with that being 2,000 different items to make sure that when you bring in your prescriptions you can have medications when you need them.

A Professional who has over 6 years of college education training them to be the most knowledgeable health provider in the use, dosage, side effects and interactions of prescription and OTC medications.
